

Reading order is not stored in the file. A content stream places glyph runs at coordinates, and any notion of a first and second column is reconstructed from the geometry by whichever extractor you happen to be running. Two extractors will disagree, and neither will warn you.

Margin requirements for the retail portfolio were revised in February following the regulator's guidance on concentration limits. The revised figure is fourteen percent against the previous eleven, applied to all positions held longer than thirty days.

The organizational cost of this is that a bug report reading the text is wrong cannot be triaged without knowing which extractor produced it, which means the parser version has to be recorded on every chunk it emits.

Counterparty exposure is measured gross rather than net, which the committee reviewed and elected to retain on the grounds that netting agreements are not enforceable in two of the jurisdictions where the book has material exposure.

A fixed threshold for column detection fails on the first document with three columns, and a document with a full-width table spanning both columns defeats the gutter heuristic entirely.

The stress scenario assumes a two hundred basis point parallel shift combined with a fifteen percent decline in collateral values, held for a rolling ninety day window.
